

NITEK®

● Outdoor Camera Housing Locally Powered w/ UTP Video

● IDF Closet Equipment Mid-Span Power

▼ Indoor Dome Camera Power/Video/Data Carried Over Category Cable

■ Head End UTP Receivers

◆ Vandal Proof Camera Housing Power and Video Carried Over Category Cable

In recent years the educational market has adopted Nitek's UTPLinks™ video transmission systems as an overall CCTV solution as well as a migration path to future technologies such as IP video systems. The illustration above demonstrates a typical school installation. Just as with an IP system a traditional Cat5 cable (shown as a red trace) routes to the nearest IDF closet. The closet provides camera power, and P/T/Z data distribution. The video from each IDF routes back to the MDF closet where the DVR is located.
